

## **RB Demo Air Wash:**

John & Mary it is a fact that humans need 3 things to live.

Good clean food, pure drinking water and clean fresh air.

You can go a day or 2 without food and water if you had to but how long can you go without air?

Exactly, and each day you will breathe several hundred cubic feet of air.

So, which one has to be most important?

Exactly, and that is what the Rainbow cleans first, just like the Rainmate only on a larger scale.

Have you ever seen the sun coming through the windows?

What do you see floating in the air?

We don't have much sun light, so I brought my own.

Look under the light.

Do you see all that dust floating by!

Watch what happens when somebody walks through you carpet.

Oh, my Goodness!

Or if somebody sits down on your furniture, Oh my look at that!

Earlier you said you have allergies, and do they cause these problems?

Headaches, Irritated Eyes, Dizziness, coughing, nausea, sore throat or runny nose?

Well polluted air is responsible for those problems and there is nothing you can do about the air outside, but we can help you with the air inside.

Do you know the EPA did a study and they found out that the air outside is 10 to 200 times more polluted than the air inside?

John, I know that is hard to believe, but have you ever asked Mary to come in for a breath of fresh air.

No, you always go outside.

That's because subconsciously we have always known it is more polluted inside than outside.

Where does all this dirty and unsafe dust come from?

Filth from the street is brought in on the bottom of your shoes.

Have you ever stepped in gum outside?

Where do you think that gum was before it was on the ground?

Exactly in somebody's mouth, then you track all their germs into your house.

Pets bring all sorts of nasty critters, from fleas to something they have killed from outside.

Every time you open the doors and windows more pollution is blow in.

Insects die in your carpeting and upholstered fabrics.

Germs from sick friends, they come over and sneeze and when they leave all their germs stay.

John and Mary, you can see why this is such a problem in your home.

The reason it is, this is what is in your dust. Paint, plastic, rubber nylon, beetles, ticks, wood, fiberglass, cockroaches and house dust mites!

Have you ever heard of house dust mites before?

This is a picture of the dust mite.

Do you know where they live?

In your mattresses and furniture.

Do you know what they eat?

You, every time you go to be thousands of these are crawling all over you, the main thing they do is crawl up your sinuses and leave waste particles that cause your sinuses to swell.

If you ever wake up in the morning and your all stuffy it's because they things have been doing their business in your nose all night long.

As a matter of fact, here is an article that says it's not the Dust mite that is the problem put it's the? **(Point to *Dung and let them say it*)**

Don't worry I'm going to show you how to take care of these things.

Have you ever driven down a dirt road in the summer?

What do you see?

Drive down that same dirt road right after it's rained a little and what do you see?

Mother Nature has a way of solving this problem and it's through moisture.

Every 24 hours there is some type of moisture in the air.

Rain, sleet, dew, fog, mist or something, John have you ever noticed how nice it smells just after a rain storm?

That's because the rain trapped all the pollution down on the ground, however you can't let it rain inside your home, it would solve the pollution problem, but it would ruin your carpets and furniture.

Mary, think about this, whenever you want something clean, your clothes, your dishes, your car or your self, what is the one thing you have to use?

Exactly, now I'm going to show you how to clean your entire home with 2 ½ quarts of water and not get anything wet.

The Rainbow is the only certified air purifier and cleaning system at the same time.

Here is the Rainbow, isn't it nice?

Look inside that water, it's clean enough to drink if it was in a glass, right?

Remember that because in a minute you will be amazed.

Who does most of the dusting?

Do you like to dust?

I don't blame you, but I'm going to show you the easiest way you have ever dusted.

Mary, just push this button.

Now you're dusting.

On this speed it takes about an hour to clean an average size room.

What we recommend is put this in the corner over there or wherever you would like to put it and run this 24/7, you will be amazed at how much dust is pulled out of your home.

Mary, how often do you dust?

Oh my! That's a lot.

What you want to do is turn this on the power wash 1 time every week for 10 minutes in each room.

All the dust is being pulled inside and wet dust can't fly so only clean fresh air comes out, so now instead of dusting once a week, now you will only need to dust about 1 time every 4 to 6 weeks.

How long would you say I had that running?

Would you drink it now?

Could you imagine what it would look like if you ran it 10 minutes in every room?

You could plant a garden in it!

Mary, what seems easier, dusting with that rag each week or just pushing a button once a week?

Of course, like the rainmate you can keep it smelling nice all the time and one of our best sellers is this disinfectant and deodorizer.

John have you ever noticed when one person gets sick, everybody gets sick?

That's because all the germs and bacteria floating around in the air.

Well this stuff kills all the germs, so you won't spread the sickness all over from one person to the other.

Since it disinfects it also deodorizes.

It eliminates smells like onions, fish, tobacco, paint and much, much more.

Does anybody smoke in the house?

You get the friends over and the light the cigarette when you're not looking.

This will eliminate that also.

This is what we call our Total Air Treatment.

We have done everything to the air except heat it and cool it.

Mary do you think your house should smell like this only when I'm here or all the time?

John another stupid question but what would you prefer to breathe, fresh clean water washed air or polluted air?
